News

Mar 09, 2009 **New product line: RT-PCR Kits & Supplements**
Our new product line for [RT-PCR](#) includes **SCRIPT Reverse Transcriptase**, a genetically engineered M-MLV Reverse Transcriptase with increased thermal stability. SCRIPT shows very high sensitivity and specificity and allows efficient cDNA synthesis from 100 bp to 10 kb.

Feb 24, 2009 **New in PCR-related Products: *in vitro* Transcription Kits**
Our new [in vitro Transcription Kits](#) provide optimized reagents for *in vitro* transcription by T7 and SP6 RNA polymerase. Get all you need to obtain high yields of RNA within a minimum reaction time!

Feb 02, 2009 **New: Microlytic Microfluidic Products**
Finally, microfluidics in a simple to use device! - We are happy to announce that [Microlytic's Microfluidic Products](#) for the crystallization of biological macromolecules are now available from Jena Bioscience! Check out more details on the [Crystal Form](#) [here!](#)

Feb 02, 2009 **Now available: Cy3-labeled Nucleotides**
We now extended our selection of [Dye-labeled Nucleotide Analogs](#) by a classic dye - **Cy3**. For an overview of all dyes available as nucleotide conjugates, please [click here!](#)

Jan 30, 2009 **Now available: Digoxigenin-labeled Nucleotides**
We just launched a new product group within our [Nucleotide analogs section: Digoxigenin-labeled Nucleotides!](#)

Jan 30, 2009 **Now available: The Jena Bioscience Catalog No. 5!**
It's finally there - our new catalog! [Request your printed copy](#) or [download the PDF version](#) today!

Products & Ordering

Nucleosides, Nucleotides and their Analogs

Natural and modified nucleotides and analogs for protein biochemistry, molecular biology...

Macromolecular Crystallography

Screens, plates and more: all you need for crystallization of biological macromolecules

Eukaryotic Expression System LEXSY

Easy prokaryote-like handling combined with eukaryotic protein expression/modification machinery

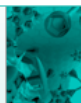

PCR-related Products

Your one-stop shop for PCR and qPCR reagents, DNA labeling, mutagenesis, oligonucleotides...

Antibodies

Antibodies to selected proteins, such as PI3 Kinases, transcription factors, prions...

Recombinant Proteins

Proteins for signal transduction research, PI3 Kinases, G-proteins; viral and microbial proteins...

Affinity Chromatography

Metal ion, GSH and Protein A resins as well as immobilized Nucleotides and amino acids for fast purification of proteins

Enzymes

Cloning enzymes such as restriction enzymes and polymerases; phosphatases, nucleases...

Probes

Labeled molecules and tools for DNA-labeling, Real-time PCR, Cell Penetrating Peptides...

Microlytic Crystal Former

Microlytic's Crystal Former™ is designed to allow growth of crystals in a microfluidic device immediately useful for X-ray diffraction studies...
